The book provides a unique perspective on the relationship between psychology and philosophy, particularly in the context of social action. The focus is on understanding how psychological processes influence political action and how political action can, in turn, shape psychological processes.

In the first part of the book, the authors explore the role of psychological mechanisms in the formation of political beliefs and attitudes. They argue that understanding these mechanisms is crucial for predicting and influencing political behavior.

The second part of the book delves into the ethics of political action, examining the moral implications of different political strategies and decision-making processes. The authors argue that a psychologically informed approach to ethics can provide insights into the decision-making processes of political actors.

Overall, the book offers a fresh perspective on the relationship between psychology and politics, emphasizing the importance of understanding the psychological mechanisms that underlie political behavior and the ethical considerations that arise from political action.
